## PROFILE

Linux systems administrator at UNC Supercomputing Center (CCAD, Argentina) and freelance DevOps. Configuration management with Ansible, containers (Docker, Apptainer), monitoring with Grafana and CI/CD; support for 360+ users of the center's clusters. DevOps diploma (UNC, Craftech, AWS). ASC26 finalist, in charge of the team's cluster infrastructure.

## EXPERIENCE

**Systems Administrator · UNC Supercomputing Center (CCAD-UNC)** Jun 2025 – Present

- Managed cluster configuration with Ansible: Slurm scheduling, partitions, memory accounting and GPU reporting.
- User support on Rocky Linux for 360+ researchers, PhD and undergraduate students: troubleshooting and software builds (Spack with Lmod modules, Docker/Apptainer, Conda/Mamba, Autotools).
- Migrated OpenDroneMap (INTA Salta) from Apptainer to JupyterHub with GPU, reusing an existing Docker image.
- Debugged MPI issues (MPICH/Open MPI ABI compatibility, launcher/PMI problems) down to a closed-source binary.
- Took part in the installation of Helvetios (288 nodes, 10,368 cores, ~896 TFLOPS peak).
- Monitored cluster usage with Grafana and Python scripts to detect underutilization.
- Docs-as-code for the center's wiki (Sphinx/ReadTheDocs, GitLab).

**Freelance DevOps** Jul 2026 – Aug 2026

- Deployed an application on a DonWeb VPS, integrated with the client's existing architecture. Automated deployment and backups with Ansible and added an on-prem server as failover for cloud outages.

**Python Developer · Seenka** Jan 2025 – May 2025

- Built alerts for faulty broadcast signals (aubio, FFmpeg, Grafana, Slack) and automation with Python, PostgreSQL and Elasticsearch.

## HPC TEAM

**Team “Carpinchos”: Argentina's only student cluster competition team** Nov 2024 – Jun 2026

- **ASC26 finalist** (Wuxi, China): one of 25 teams out of 300+ universities. Also IndySCC24 and IndySCC25 (on-site at SC25, St. Louis, USA).
- Owned the team's cluster infrastructure: Terraform for local testing, Ansible for provisioning, BeeGFS and NFS, Slurm.
- Sponsorship campaign: funding from the university, local government and private companies.

## PROJECTS

**Kubernetes deployment · DevOps diploma** Jul 2026

- 3 services on Kubernetes: own service with a read-replica database, a service with a Redis sidecar, and a pod discovery service. Per-environment configuration with Kustomize.

**Homelab** Personal

- Self-hosted services: Immich and a Minecraft server behind Traefik as reverse proxy, Dozzle for container logs, remote access over Tailscale.

## EDUCATION

**Computer Analyst degree (final course, Dec 2026) and Licenciatura in Computer Science (5-year degree, in progress) · FaMAF, National University of Córdoba** 2021 – Present

**DevOps Diploma · UNC, Craftech, AWS: cloud (AWS, Terraform), Kubernetes, Docker, CI/CD, observability and SRE** Mar 2026 – Oct 2026

## SKILLS

| | | | |
|---|---|---|---|
| **Systems** | Rocky Linux, Bash, Slurm, Spack, MPI, BeeGFS, NFS | **IaC & automation** | Ansible, Terraform, Kustomize |
| **Containers** | Docker, Apptainer, Kubernetes (project) | **CI/CD** | GitLab CI, GitHub Actions |
| **Cloud** | AWS (diploma), VPS | **Monitoring** | Grafana |
| **Languages** | Python, Bash, JavaScript | **Databases** | PostgreSQL, MySQL, MongoDB, Elasticsearch |
